Recap Plataforma de Dados

Oracle Data Platform

Seu pilar para a nova era dos dados.

Quais são as principais **Arquiteturas de Dados?**

Data Warehouse + Data Lake = Data Lakehouse

Data Warehouse

+

Data Lake

=

Data Lakehouse

Armazena **dados estruturados** organizados para análises rápidas e relatórios.

Data Warehouse

+

Data Lake

=

Data Lakehouse

Guarda **dados brutos**
(estruturados e não estruturados)
em grande volume e
flexibilidade.

Data Warehouse + Data Lake = Data Lakehouse

Combina o **armazenamento flexível** do Data Lake com as **capacidades analíticas** do Data Warehouse.

Arquitetura de Referência Oracle (Data LakeHouse)

AIDP Workbench

Oracle AI Data Platform Workbench

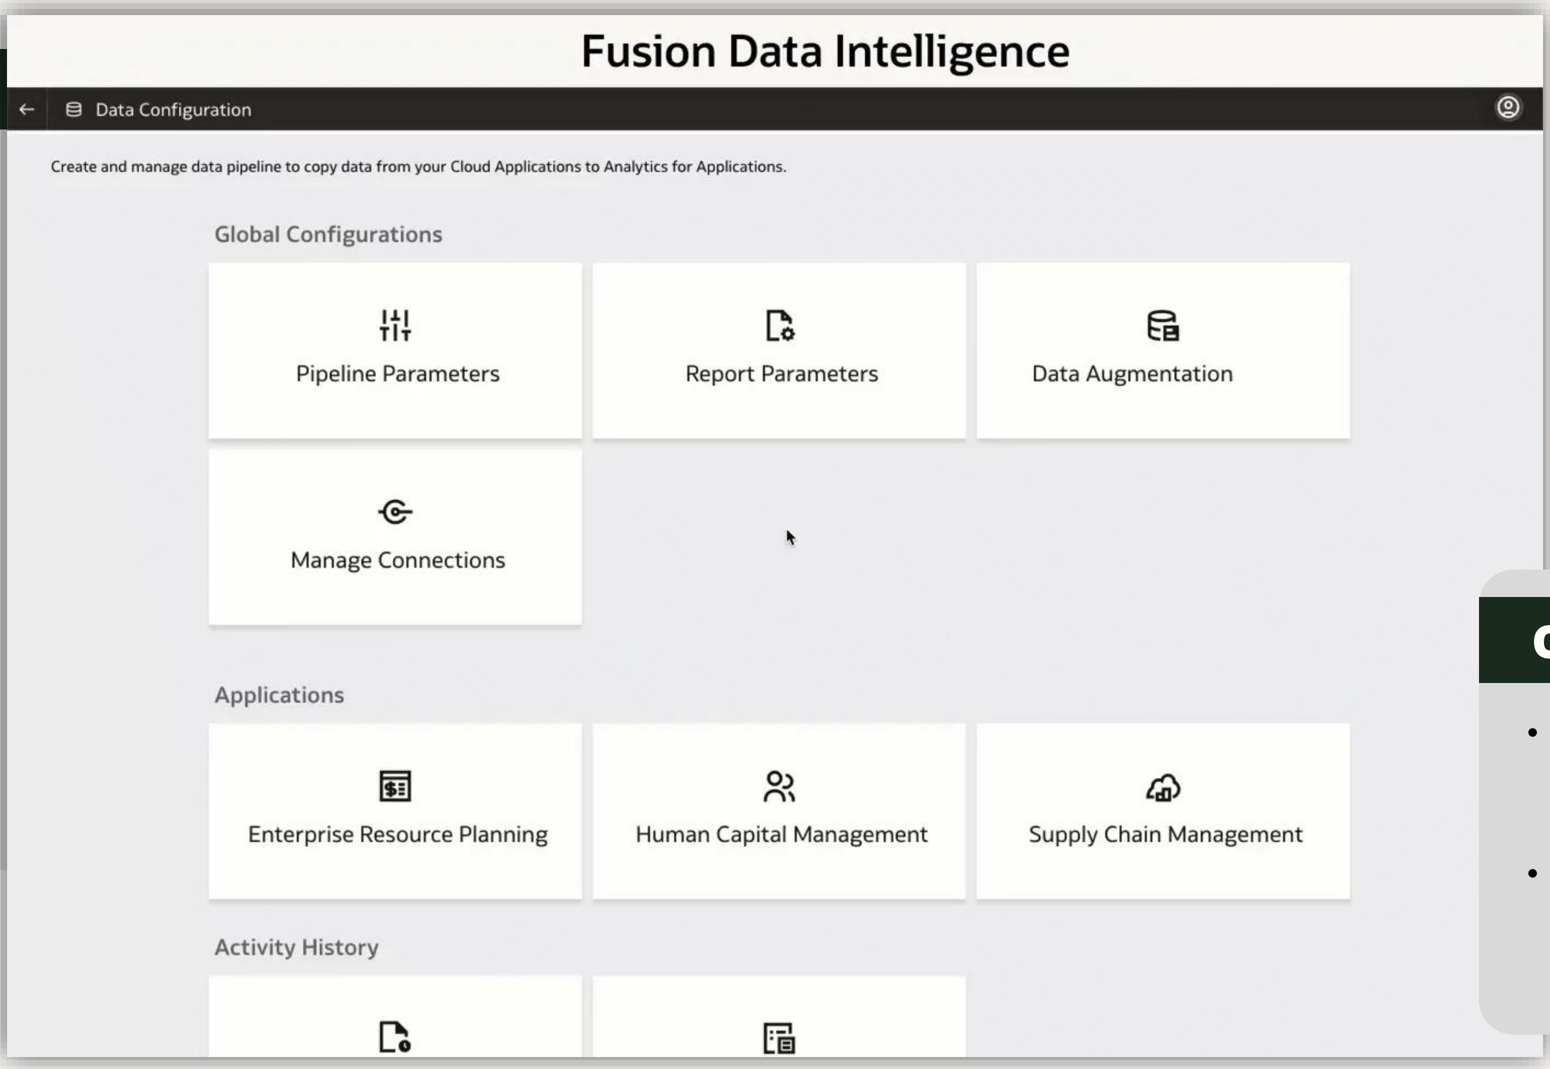
- Data Integration
- Data Engineering
- Data Science
- Orchestration
- Agent Studio
- Catalog and Governance

AI Data Platform Workbench é um ambiente de desenvolvimento onde **engenheiro de dados, cientístas de dados, desenvolvedores, e administrador de dados** podem construer e **governar lakehouses, aplicações, e agents de AI**

Integração Nativa com Soluções Fusion

Data Integration

- Any source connectivity
- Live access to sources or ingestion into the Lakehouse
- Zero-ETL data sharing from the Fusion and Health AI data platform



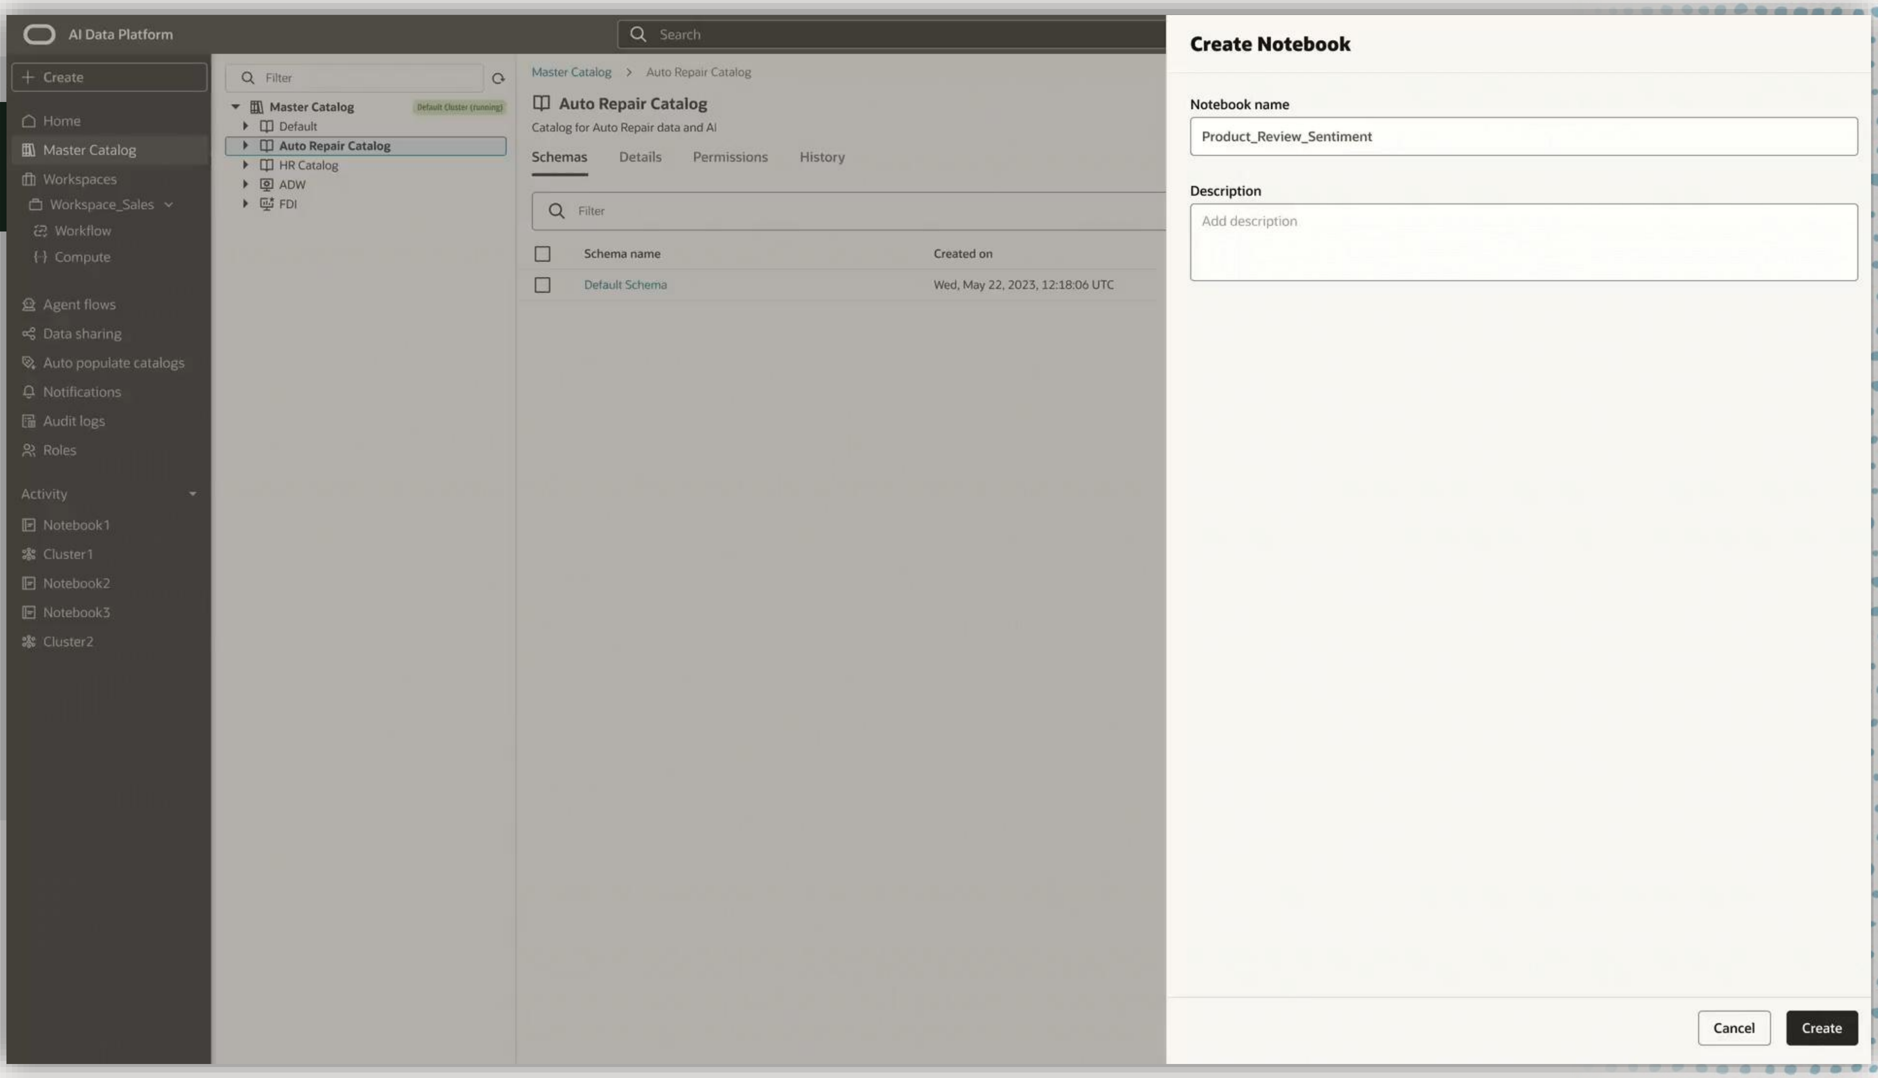
Oracle Conectivity

- Deep integration with Oracle technologies
- Native connectivity with Oracle applications

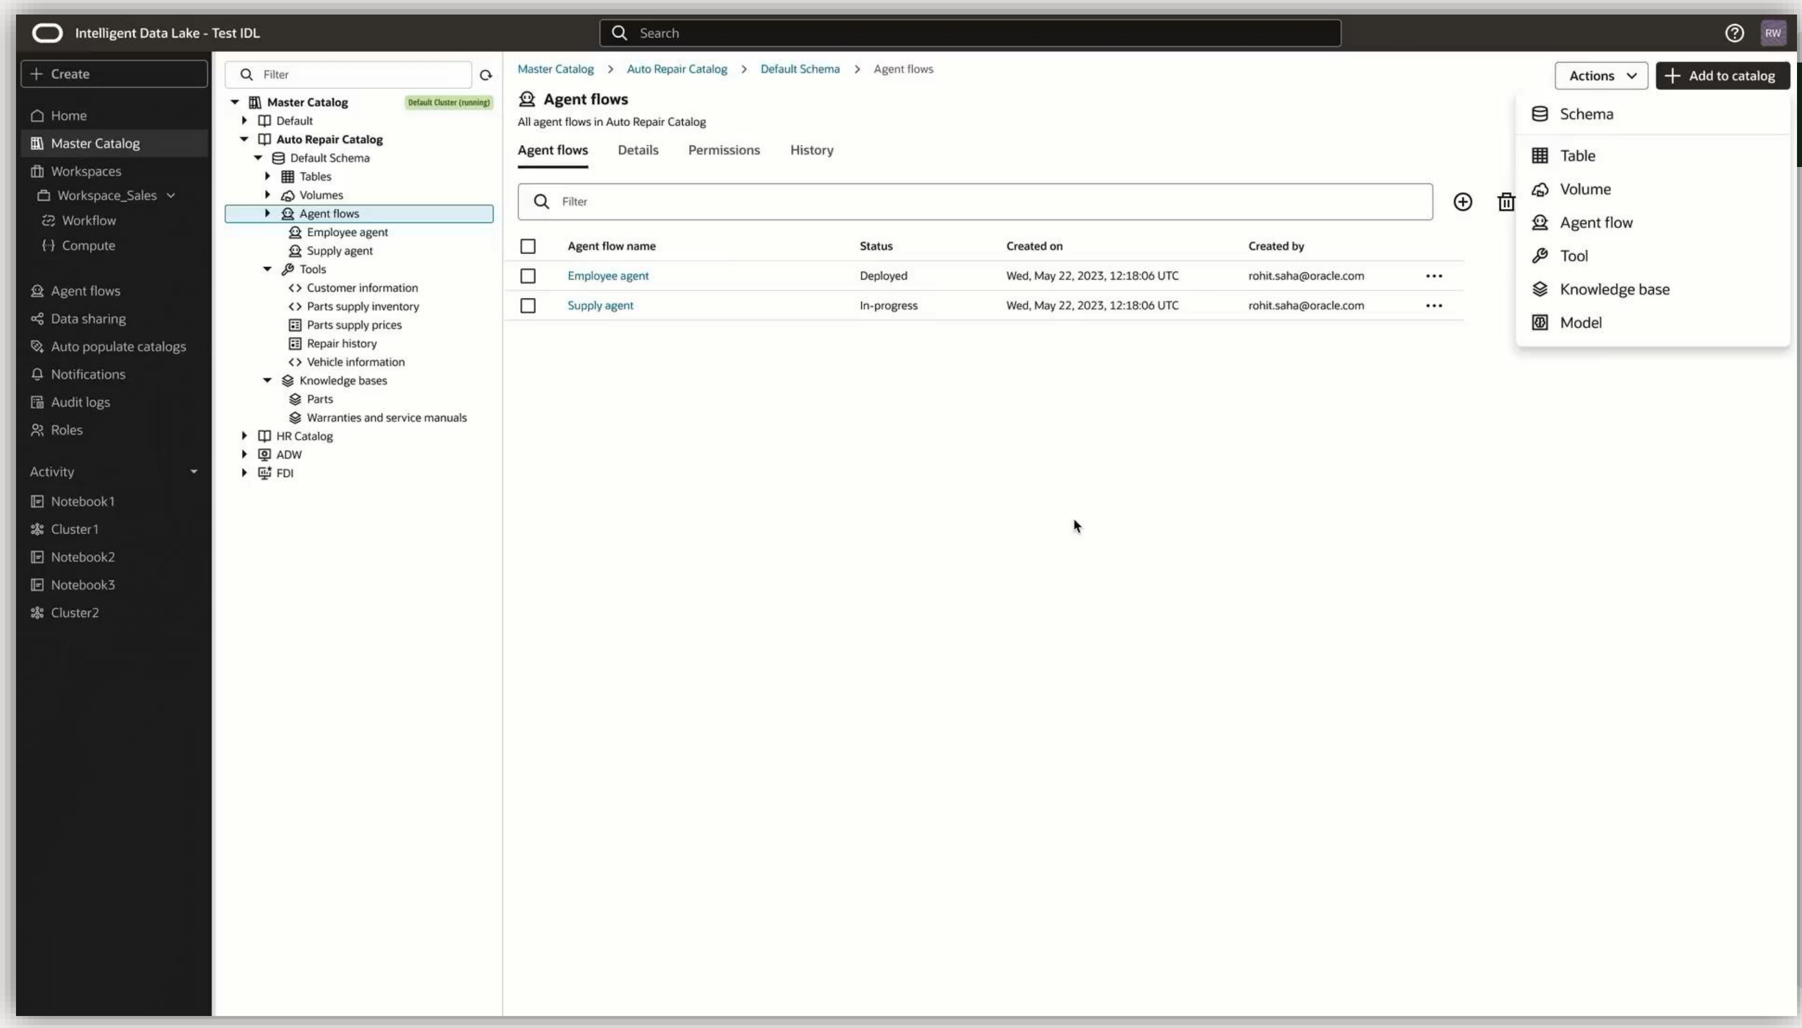
ML never been easier

Data Engineering & Data Science

- Unified IDE for data engineering and data science
- Flexible compute options
- Multilanguage development support
- Unified workflow orchestration



Easy to create AI Agents



AI Agents & Applications

- **Low-code and code-first AI development**
- **Integration with OCI Generative AI and Oracle 23ai**
- **Lifecycle management for AI assets**
- **Integration with Fusion AI Agent Studio**

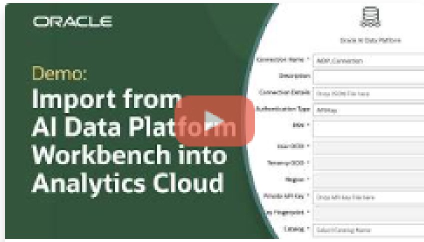
Videos

Learn about Oracle AI Data Platform by watching these videos.

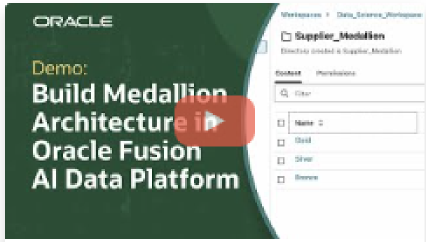
Sort by Featured Title



How to Create an AIDP Connection Using OAC Native Connector

In this demo, you learn how to create a secure, native connection from Oracle AI Data Platform Workbench to Oracle Analytics Cloud using the Oracle Analytics Cloud native connector. This connection lets you access, analyze, and visualize curated data from Oracle AI Data Platform Workbench in Oracle Analytics Cloud, or OAC without manual exports or complex integrations.

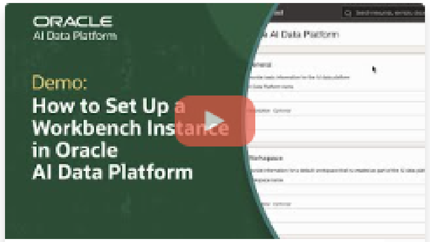
For more information, see the documentation.



How to Build a Basic Medallion Architecture in Oracle AIDP Workbench

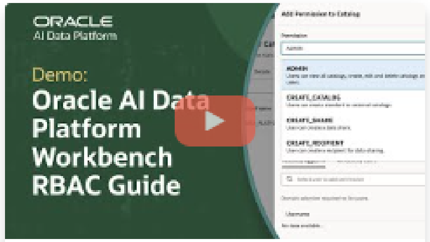
In this tutorial, you will learn how to design a basic Medallion Architecture in Oracle AI Data Platform Workbench. See step-by-step instructions for uploading supplier data, structuring workflows with catalog management and schema design, and transforming and enriching data through generative AI prompts. The demo covers preparing data in the Bronze layer, transforming and validating it in the Silver layer—including AI-driven augmentations such as generating continent values and review sentiment—and curating trusted Gold layer datasets for analytics and business reporting.

For more information, see the documentation.



How to Create an Instance in Oracle AI Data Platform Workbench

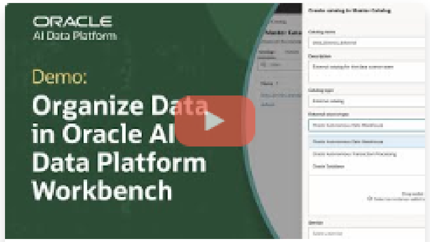
In this step-by-step tutorial, learn how to create an instance in Oracle AI Data Platform Workbench—a unified and secure workspace for data integration, model development, and analytics collaboration. The video demonstrates the process from selecting the right compartment and configuring access policies to naming and creating a dedicated environment for your projects. Understand how compartments organize resources, why proper IAM permissions are required, and how to set policies to manage user access while maintaining security. Once the instance is created, teams can ingest data, build AI models, and develop analytics in a controlled, role-based environment. The video also provides tips for optimizing permissions and streamlining resource organization



How to Create and Assign Roles in Oracle AI Data Platform Workbench

Oracle experts guide viewers through managing system roles—such as admin and auditor—delegating responsibilities, and cascading permissions efficiently. See how to add users by username or OCID, assign data engineer roles, and apply best practices for controlling data access. Gain insights into auditing, permission inheritance, and the impact of role assignments on data governance. Oracle AI Data Platform Workbench empowers administrators to safeguard sensitive data and streamline teamwork while maintaining robust access controls. For more videos and detailed resources on secure data management, explore the links below.

For more information, see the documentation.



How to Organize Data with Catalogs and Schemas in Oracle AI Data Platform Workbench

This comprehensive demo walks through creating both standard and external catalogs, connecting external data sources, and managing different data types. Viewers learn to establish and configure schemas, import tables, and manage volumes, ensuring efficient collaboration for team-based workflows. The tutorial also explains catalog types and demonstrates practical steps for maximizing Oracle AI Data Platform Workbench for enterprise-scale analytics. Discover best practices for building a unified data environment and enabling faster business insights.

OCI Dataflow Private Endpoint Use Cases

January 7, 2025 | 15 minute read

Mario Miola
Principal Solutions Architect

Introduction

Data Flow applications can be configured to access data sources hosted within private networks, enabling secure and seamless connectivity and significantly reducing the exposure of sensitive data to potential breaches or unauthorized access. By limiting exposure to public networks, this approach reduces the risk of data breaches and unauthorized access, a critical concern for industries handling sensitive information. For example, organizations subject to regulations like the General Data Protection Regulation (GDPR) in the EU can ensure personal data remains protected within controlled environments, minimizing the risk of non-compliance. Similarly, healthcare providers bound by the Health Insurance Portability and Accountability Act (HIPAA) in the United States can securely process protected health information (PHI) through private network configurations, safeguarding patient confidentiality. This architecture also supports compliance with other regulatory frameworks, such as SOC 2 for data security and privacy, enabling organizations to meet their obligations while maintaining high-performance data processing.

↑ Oracle AI Data Platform Essentials: Training and Assessment

Enroll in this path

Learning Path

Status
Not Started

This learning path is designed to introduce learners to the core concepts, architecture, and capabilities of Oracle AI Data Platform (AIDP), this offering explores how to organize projects, apply policies, and build data lakes that support analytics and AI workloads.

It is intended for data professionals who are new to Oracle AI Data Platform and want to build a strong foundation for governed enterprise-ready data operations.

Take the assessment at the end to earn a badge.

Dica de Workshop

Getting Started with Oracle AI Data Platform Workbench - Data engineering

Share Start

4 hours

Outline

Lab 1
Create AI Data Platform - Instance in your tenancy
Lab 2
Create AI Data Platform - Workspace and compute cluster
Lab 3
Load files from Github into OCI Bucket and create Files to Bronze layer
Lab 4
Cleanse and curate data from Bronze and save results into Silver layer into internal catalog entry
Lab 5
Prepare data in Silver layer for serving Gold layer and save results into Gold layer into internal catalog
Lab 6
Create external catalog with Autonomous AI Database and reuse content from Lab 5 to save in Autonomous AI DB.
Lab 7
Create workflows for Bronze, Silver, Gold and run each workflow
Lab 8 (optional)
Create workflow of workflows to run all notebooks and plan scheduling

Prerequisites

- OCI Policies for AI DP need to be place
- Object Storage Bucket Understand and availability of it
- Autonomous Database Understand and availability of it
- Basic understanding about Python and SQL Understand and availability of it

Como Experimentar

Cloud >

Oracle Cloud Free Tier

Build, test, and deploy applications on Oracle Cloud—for free.

Start for free

Sign in to Oracle Cloud

Here is how Oracle Cloud Free Tier works

1

Start with a **US$300 cloud credit.*** You'll have 30 days to use it to test your applications on all OCI services, in addition to Always Free Services in your Free Tier account.

2

At any time during or after the 30-day period,* switch to a **Pay As You Go** account. Pay only for services that exceed the monthly free amounts from Always Free Services.

3

If you do nothing after 30 days, you'll continue to get Always Free Services in your Free Tier account.

Obrigado!
