Top 10 funcionalidades do Autonomous AI Database

1 Provisionamento Automático

Implantação totalmente automatizada na nuvem usando ferramentas modernas de DevOps e/ou portal na nuvem. Implantação realizada utilizando as melhores práticas de continuidade dos negócios.

2 Configuração Automática

Não é necessário se preocupar com parâmetros de configuração ou detalhes sobre como configurar as coisas para diferentes workloads (ou seja, DSS versus OLTP).

3 Indexação Automática

Reduzir a carga de ajuste de desempenho. Manter um desempenho consistente ao longo do ciclo de vida do desenvolvimento de software. Focar na inovação, não em manter as coisas funcionando de forma otimizada

4 Escalável

Dimensionamento automático de até 3 vezes mais CPUs e armazenamento. Escalonamento independente de armazenamento e computação. Verdadeiro "Pague pelo uso" baseado nas necessidades da aplicação.

5 Proteção de Dados Automatizada

Proteja automaticamente dados sensíveis e regulamentados no banco de dados por meio de um console de gerenciamento unificado. Avalie automaticamente a segurança de sua configuração, usuários, dados sensíveis e atividades incomuns no banco de dados

6 Segurança Automatizada

Implantado com criptografia de ponta a ponta por padrão. Proteção contra qualquer ataque de phishing baseado em SO ou administração

7 Failover Automatizado

Fornece até 99,995% de SLA. Máxima Continuidade do Negócio da Aplicação

8 Backups Automatizados

Proteção contínua de dados com backups. Restauração garantida até 60 dias anteriores, para qualquer momento desejado

9 Atualizações Automatizadas

Zero tempo de inatividade, nunca se preocupe novamente com a aplicação de patches de segurança, amigável ao ciclo de vida do desenvolvimento de software.

10 Detecção e Solução Automatizada

Redução significativa no tempo de negócios/DBA gasto com suporte. (observou-se uma redução de mais de 80% no tempo gasto pelo cliente interagindo com o suporte)

Alternativas de deployment para sua cloud e necessidade de dados

- My custom flows

PRE-BUILT AGENTS

- Knowledge agents
- Data analysis agents

UTILITIES

- Agent builder
- Prompt lab
- Datasets

SETTINGS

- Data sources
- SSO settings
- User management
- LLM management

Pre-built agents
Ready-to-deploy intelligent agents with complete functionality

Knowledge agent
Intelligent information processing

Deploy immediately with built-in capabilities for document analysis, research assistance, and information synthesis. No additional customization required.

Create new

Data analysis agent
Specialized data processing

Ready-to-use specialized intelligent agent for analyzing datasets, generating reports, and providing actionable insights. Deploy instantly for immediate results.

Create new

Custom flows
Build tailored solutions using our template gallery

Template gallery
Customizable flow templates

Perfect for unique use cases that don't fit standard templates. Design your agent's behavior, configure custom flows, and integrate with your specific tools and data sources.

See all

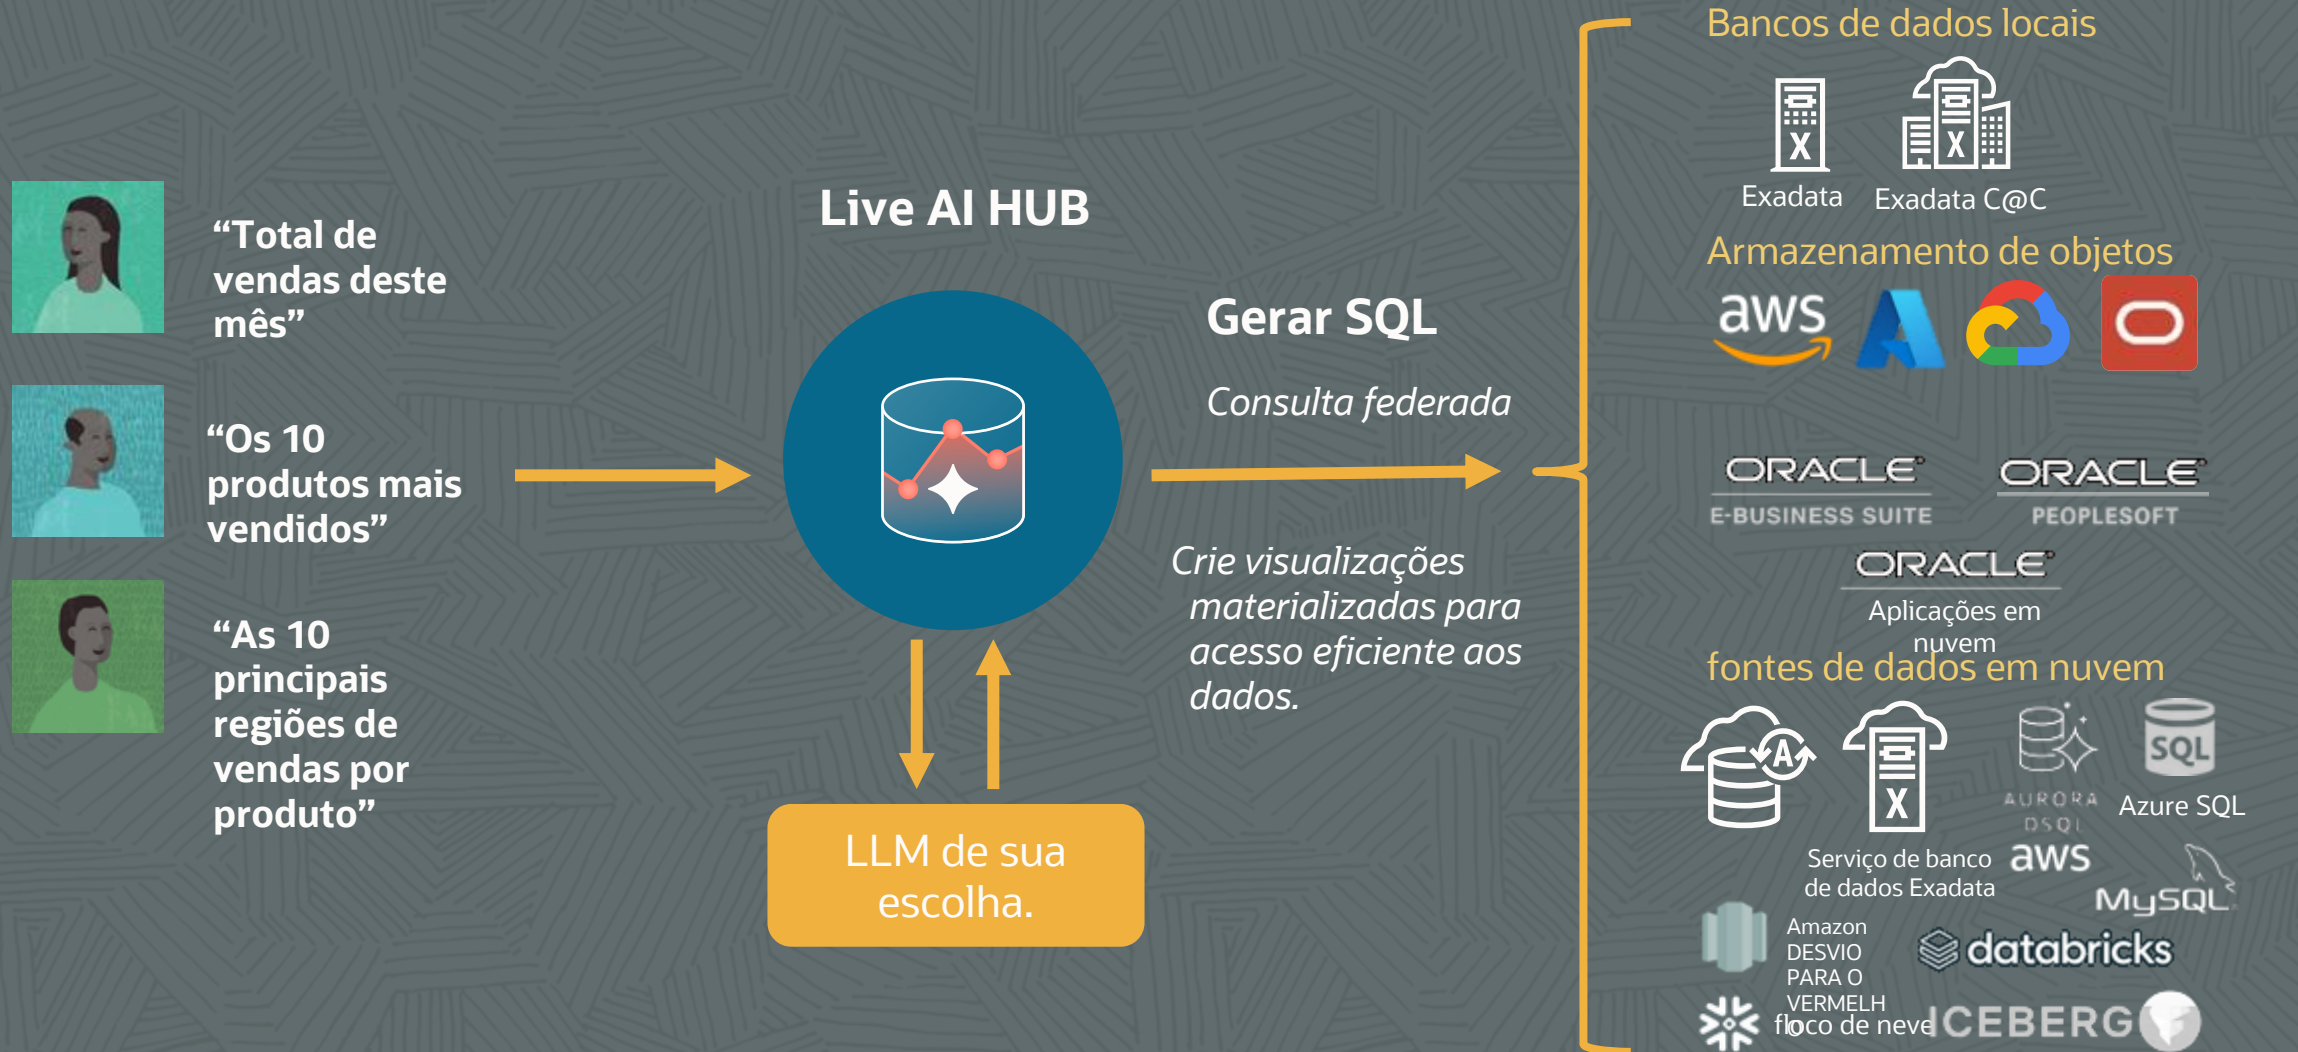

Agent builder
Design code-free agents

Enables users to design, orchestrate, and automate processes by combining components—such as language models, data connectors, APIs, and specialized agents—no programming required.

Start building

↑ Become an Oracle Autonomous AI Database Professional (2026)

Enroll in this path

Learning Path

Status
Not Started

The Oracle Autonomous AI Database Professional Learning Path equips database professionals, cloud engineers, developers, and architects with the skills needed to deploy, manage, secure, optimize, and extend Oracle Autonomous AI Database solutions. This learning path covers core database administration concepts, Autonomous Database Serverless and Dedicated deployments, performance monitoring, security, disaster recovery, and migration strategies. Participants will also explore advanced AI capabilities, including Select AI, AI Agents, Vector Search, Retrieval-Augmented Generation (RAG), MCP Server integration, Oracle Machine Learning, and Autonomous AI Lakehouse. By completing this learning path, learners will gain a comprehensive understanding of Oracle Autonomous AI Database and its role in supporting modern data and AI initiatives.

Skills you learn:

- **Autonomous Database Administration:** Provision, manage, and maintain Autonomous AI Database environments.
- **Performance and Scalability:** Monitor, optimize, and scale database workloads.
- **Security and Availability:** Implement security controls, backup, recovery, and disaster recovery strategies.
- **Database Automation:** Use Oracle Cloud Infrastructure tools and APIs to streamline operations.
- **Application Development:** Build applications using Oracle APEX, JSON, Text, Spatial, Graph, and Vector capabilities.
- **AI-Powered Data Solutions:** Use Select AI, AI Agents, RAG, Vector Search, and Oracle Machine Learning.
- **MCP Server Integration:** Connect AI assistants and enterprise data through the Autonomous Database MCP Server.
- **Migration and Modernization:** Migrate workloads and adopt modern Autonomous AI Database architectures.

Content is continuously updated to align with the latest Oracle Autonomous AI Database releases, AI innovations, and cloud database best practices.

Dica de Workshop

Build a Data Lake with Autonomous AI Lakehouse

Share Start

🕒 2 hours, 30 minutes

Outline

- Introduction
- Set up the workshop environment
- Load local data
- Enhance data for analytics using the Table AI Assist tool
- Install and use the Autonomous AI Database Excel Add-in
- Load and analyze JSON data
- Link to data in public object storage buckets
- Link to data in private object storage buckets
- Load and analyze data from REST endpoints
- Create External Tables using the Delta Sharing protocol
- Query data from multi-cloud data lakes
- Create and share data products from the AI Lakehouse
- Integrate AI Lakehouse with existing data catalogs
- Improve query performance
- Learn about AI Lakehouse's support for Multiple Languages
- Clean up resources used in this workshop (optional)

Prerequisites

The user must have the necessary permissions to:

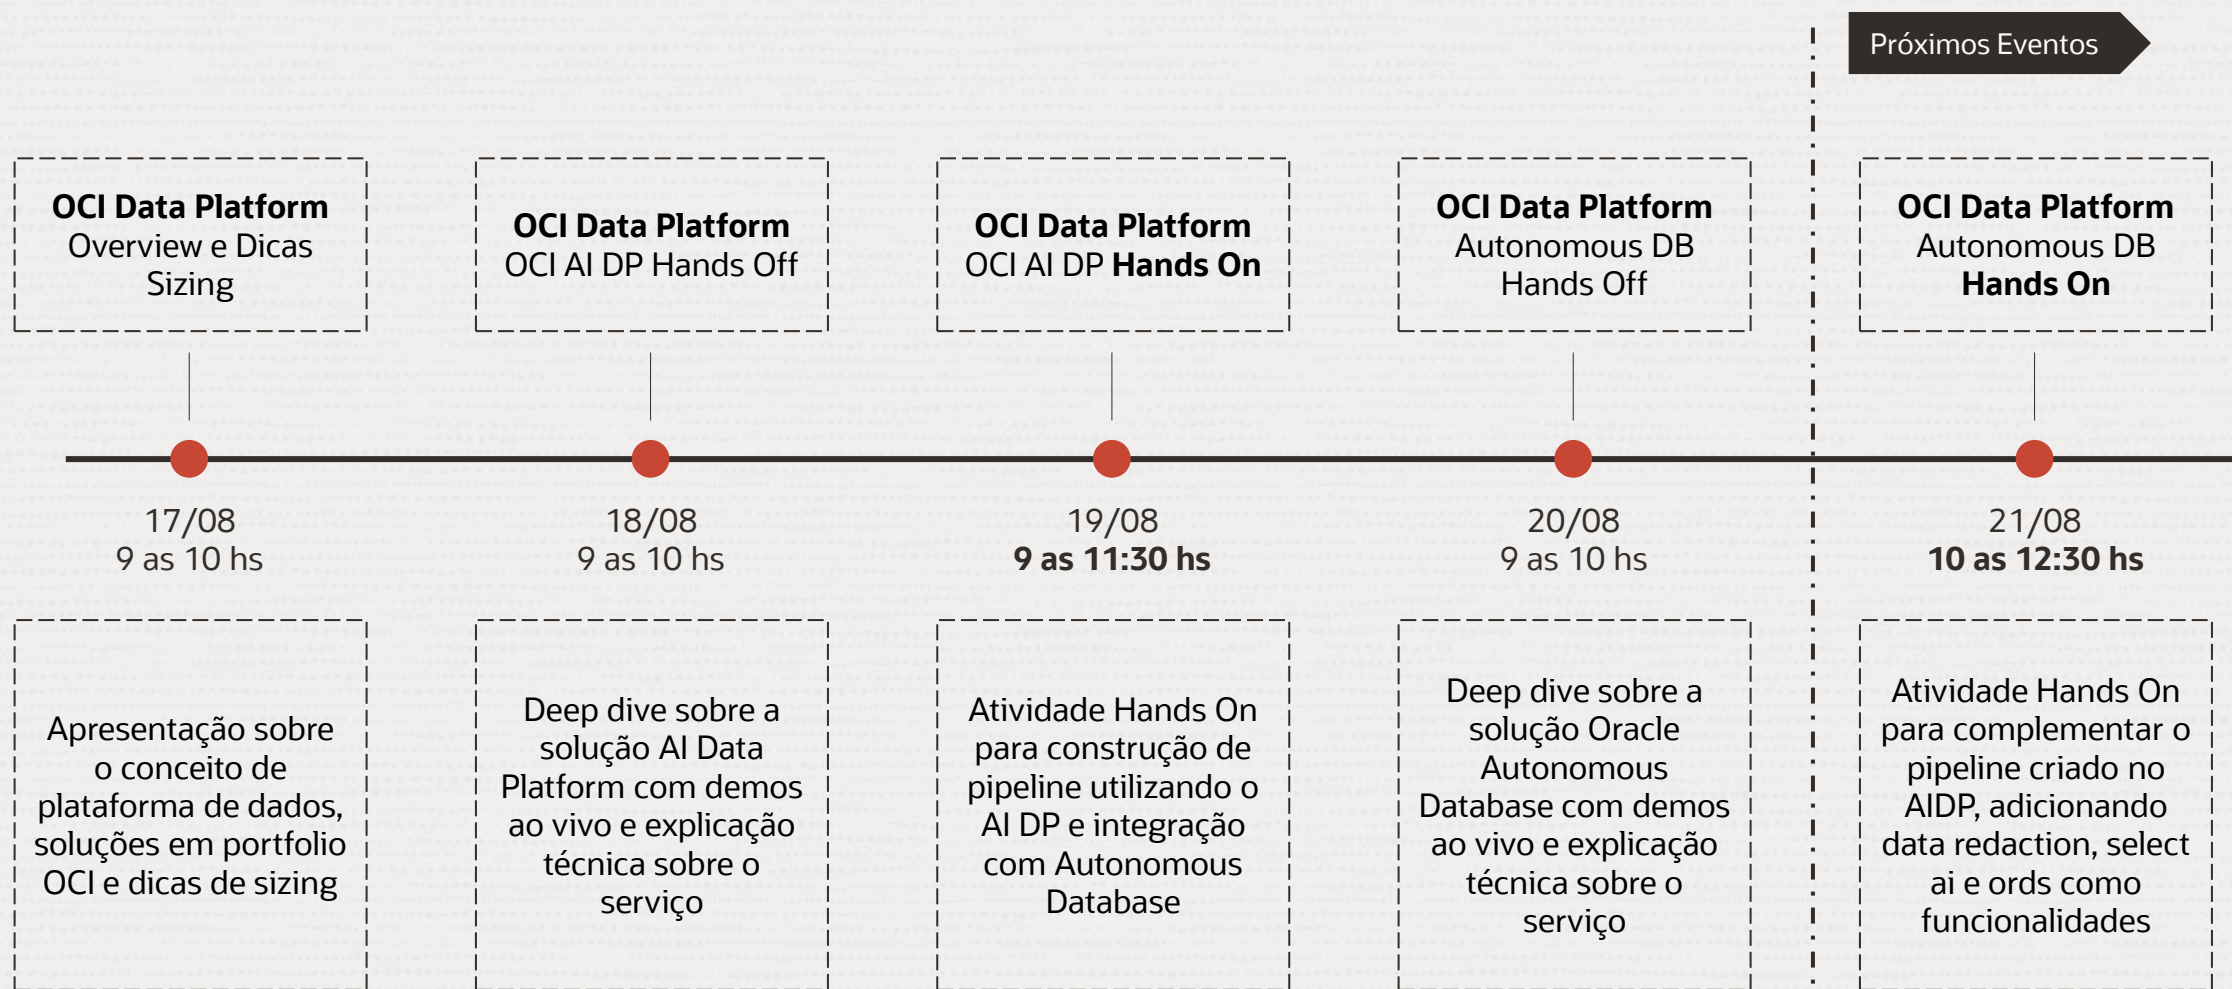

- Provision and use an Oracle Autonomous AI Lakehouse instance
- Manage Oracle Object Storage buckets
- Familiarity with Oracle Database and SQL is desirable, but not required
- Some understanding of cloud and database terms is helpful
- Familiarity with Oracle Cloud Infrastructure (OCI) is helpful

About This Workshop

Data is everywhere stored both locally and on the cloud in different format such as CSV, Parquet, JSON, ORC, Avro, and the new table format that will be available soon such as Iceberg and Delta Share. Although the metadata can stored in different places, Autonomous AI Lakehouse can work with it whether it is stored locally (using PL/SQL, API, and the UI) or in central places in data catalogs (such as OCI DCAT and AWS Glue). AI Lakehouse provides high performance when querying external data at scale. Finally, AI Lakehouse provides multi-language support to process Data Lakes such as SQL, Python, R, and REST.

The labs in this workshop walk you through all the steps that you need to build and access the Data Lake (Oracle Object Storage buckets) using Autonomous AI Lakehouse. First, you set-up the workshop environment and create the necessary resources such as a compartment, an Autonomous AI Lakehouse instance, and Oracle Object Storage resources. Next, evolve object storage files into meaningful business entities by defining the metadata for external data in AI Lakehouse using several methods such as programmatically using PL/SQL scripts, using the Database Actions user interface, or by synchronizing with Data Catalogs (to derive the metadata) such as OCI Data Catalog and AWS Glue. Next, you can gain insights from Data Lakes by querying data that lives in your Oracle AI Lakehouse and combine that with data that is stored in your Oracle Object Storage buckets using regular SQL select statements that includes joined tables. You also move data to Object Storage buckets by exporting your datasets. Finally, you query your data using the SQL Worksheet.

Como Experimentar

Cloud >

Oracle Cloud Free Tier

Build, test, and deploy applications on Oracle Cloud—for free.

Start for free

Sign in to Oracle Cloud

Here is how Oracle Cloud Free Tier works

1

Start with a **US\$300 cloud credit**.^{*} You'll have 30 days to use it to test your applications on all OCI services, in addition to Always Free Services in your Free Tier account.

2

At any time during or after the 30-day period,^{*} switch to a **Pay As You Go** account. Pay only for services that exceed the monthly free amounts from Always Free Services.

3

If you do nothing after 30 days, you'll continue to get Always Free Services in your Free Tier account.

Obrigado!
